

Volume 2019

A Safety markings

There are markings printed with transparent ink, they are visible with bare eyes.

B Fibers and water stamp

There are fibers in the vouchers which are visible only in UV light, and a water stamp that is visible when looking against light.

C Checksum

The checksum is formed by adding up the four last digits in the voucher's serial number (circled with red) and adding 10. Thus, the checksum is no less than 10 and no more than 46.

D Smart box

On each sides of the voucher, there is a smart box that has the information which makes the voucher unique.

E Code

There is a three digit code which is unique in every voucher printed on the black bar.

F Serial number

The 4 last digits of the voucher's serial number form the value of the voucher.

G New safety markings

There are multiple Edenred logos printed with transparent ink, they are visible with bare eyes.
